

MULISPLITTER SAW LONGITUDINAL CUT

MAINALI
LONG LIFE TECHNOLOGY

The MULTISPLITTER SAW with splitting conveyor has a special design with multiple saws that are working in parallel providing longitudinal cuts. It has been developed to make the cuts safely and quickly. It is a continuous cycle machine, compact and easy to use.

Depending on the type of product to be cut, the machine consists of lateral traction belts or a tunnel.

The MULTISPLITTER stands out for its safety and versatility, it can be customized according to the customer's needs.

The operator, who is not specialized, has to introduce the product into the intake tunnel and it comes out on the other

side cut into multiple pieces, avoiding the risk of labor accidents.

The MULTISPLITTER SAW is capable of absorbing as many parts as an operator is able to feed into it, so the machine increases production exponentially.

ELECTRICAL POWER tunnel 11kW

ELECTRICAL POWER belts 11,5kW

WEIGHT 680Kg

VOLTAGE 380-490V III + T or 220V III+T

FOOTPRINT 1500mmLx1500mmWx1900mmH
